

Open Ended Questions:

(Does not work with Flubaroo)

You can use a Google form for some questions and give the students one or more open-ended questions on paper.

1) First, grade the quiz using the “technical” grading system.

* Name that column Correct Points.

2) Score the open-ended responses as you usually do.

3) Then, add a few more columns to the spreadsheet to finish up.

a) a column for points someone would get since it's open ended. That will allow you to give the

student points if they get that question partially right. Name this column Open Ended Points (at top of column).

b) a column for the grade

Formula to use in this column:

=sum(Correct Points cell:Open Ended Points cell)

c) a column for the percentage (if desired)
